

Acidophilus Complex

Many of us automatically think "bad" when we think of "bacteria." After all, if bacteria form a parasitic association with other organisms, they are classed as pathogens. Pathogenic bacteria are a major cause of human disease and infections. Yet probiotics such as acidophilus are considered beneficial and are sometimes referred to as "friendly" bacteria. Some of the ways they are thought to promote health include suppressing the growth of potentially harmful bacteria, improving immune function and enhancing the protective barrier of the digestive tract.

The digestive tract is host to about 400 different kinds of bacteria and yeasts. Among these, *Lactobacillus acidophilus*, *B. bifidum*, and *B. longum* and other members of the *Lactobacillus* family are especially important to your health. These strains of bacteria are considered "pro-biotic" bacteria since they help maintain intestinal health, and serves as a natural antibiotic against potentially harmful organisms.

Pure Advantage's Acidophilus Complex uses unique human strains selected specifically to adapt to the human intestinal tract. Lactobacillus bacteria predominantly colonize the upper to lower part of the small intestine, while *B. bifidum* and *B. longum* colonize primarily the lower part of the small intestine to the large intestine. Combining these strains may help suppress harmful bacteria and the substances they produce along the entire intestinal tract. Acidophilus Complex is ideal for those who have been exposed to antibiotics and would like to restore their intestinal flora. Acidophilus is also great for those who would simply like to assure a surplus of beneficial bacteria in their intestinal tract.

Features

- Pure Advantage probiotics are non-dairy, carefully cultured human strains for proven and effective human intestinal adherence and colonization.
- Pure Advantage are heat stable and thus don't require refrigeration as finished products.
- Pure Advantage Probiotic Complex have a long shelf life (3 to 4 years as finished products) and are guaranteed stable through expiry following proper storage and handling procedures.
- Pure Advantage probiotic products have a stronger ability to withstand stomach acids than other probiotics

Benefits

- Stimulate/enhance immune system
- Maintain intestinal health (diarrhea, constipation, digestion)
- Maintain/restore a balanced (or healthy) intestinal flora
- Promote healthy, friendly or beneficial flora
- Alleviate gas
- Replenish/bolster natural friendly flora after antibiotic usage
- Inhibit bacterial/viral infections
- Candida and H. pylori inhibition/treatment
- Reduce undesirable compounds generated in the intestine
- Help produce vitamins, especially B vitamins
- Maintain healthy cholesterol level
- Maintain healthy bile acid system
